TwinTurn®
WINE OPENER

Is there anything better than opening
a bottle of good wine?
It is the sure sign that something good
will follow.

A relaxing evening for two,
a dinner with good friends
or something to celebrate.

The gentle feeling when the cork is
loosened from the bottle is
one of life's simple pleasures.

TwinTurn® wine opener is based
on well-known products:
The classic 'Twist n' Pull' corkscrew
and the 'Ah-So' corkscrew.
Now they can be combined so the
two parts lock together into one unit.
Then you know you are on a safe path.
It's actually really simple and just
requires a minimum of practice
and a few twists of the wrist.

I

Gently wiggle the two prongs down between the cork and the bottle. Insert longest leg first.

It is important to gently wiggle step-by-step, otherwise you risk pushing the cork down into the bottle.

This corkscrew part is also known as butler's friend or "Ah-So" (from the German *Ach So!*, meaning "Now I understand!").

The two-prong cork puller can extract a cork without damaging it - to allow sampling the wine before re-inserting the cork.

2

Holding the bottle securely, carefully turn half a turn.

This loosens the cork from the bottle.

In bottles of vintage wine in particular, the cork can get very stuck and therefore be difficult to remove in one piece.

When the corkscrew part is rotated, the two legs cut the cork free from the bottle.

In most cases, the cork can already now be pulled out in one piece. With old wines, this can be risky, as the cork can either break or simply stay in the bottle.

3

Insert the corkscrew worm into the center hole of the Ah-So part and screw it all the way down.

In the Ah-So part, there is an internal thread which is precisely adapted to the worm, so that it screws down exactly in the middle of the cork.

The internal thread also ensures that the two corkscrew parts lock together as a whole unit.

When the worm is screwed down precisely in the middle of the cork, maximum 'hold' is ensured when the cork is pulled up.

4

**With the two handles
now together,
the cork is captured
both inside and outside.**

The spiral worm sits in the middle
and the two flat prongs clamp
securely around the cork.

The TwinTurn® self-locking
construction ensures that you can
pull up the cork with the two parts
together as a whole.

There is therefore no risk of only
pulling up one part and thereby
destroying the cork.

5

Holding the bottle securely, slowly pull and twist the combined TwinTurn® upward while continuing to turn to remove the cork.

You are now ready for a relaxing evening for two, a dinner with good friends or something to celebrate.

Is there anything better than opening a bottle of good wine?

Wine should be
opened with the
joy of anticipation
combined with
respect for this
divine drink.
